

ERGOFERT ACTIVATOR RESIDUI

ergofert

ORGANIC FERTILIZER - YEAST FLUID EXTRACT CONTAINING SEAWEED

1 L flagon
5 L tank

HOW IT WORKS

- **It breaks down the residues of pesticides in the plants.**

The product is acting on plant metabolism and on pesticide molecules by transforming their organic components in carbon dioxide and water.

- **Detoxifies plants from chemical residues;**
- **Strengthens the natural defences and accelerates the metabolism of the plant;**
- **Improves photosynthesis;**
- **Increases the consistency and shelf life of crops;**

THE BEST RESULTS ARE OBTAINED BY APPLYING ERGOFERT ACTIVATOR RESIDUI IN MIX WITH THE AGROCHEMICAL WITHOUT REDUCING THE EFFICACY OF THE LATTER, BUT EVEN FAVORING ITS INTAKE AND STABILITY.

CHARACTERISTICS AND SECTORS OF APPLICATION

It is a newly developed product consisting of a mixture of bacteria and enzymes (lipase, protease, amylase, chitinase, cellulase, etc.) supported by polymeric units of natural origin. The product contains components of natural origin which promotes the zymogenesis.

This enzymatic-microbial complex stimulates plant growth, addresses and accelerates the degradation processes which are used by endogenous and exogenous residues present in the soil and on vegetation, thus detoxifying the environment surrounding the plant. The residues are transformed in substances that can be used again by the same plants: water, carbon dioxide, humus, etc.

COMPOSITION

NITROGEN ORGANIC FERTILIZER - fluid extract of yeast containing seaweed.

Nitrogen (N) organic 1%, Carbon (C) total organic of biological origin 10%, pH = 6.5, organic matter with nominal molecular weight <50 KDa minimum 30%,

DIRECTIONS FOR USE

If you apply the product after the agrochemical, use 3 L / ha of ERGOFITO ACTIVATOR RESIDUI by foliar spray and 3 L / ha by soil, repeating it after 3 - 4 days at the same dosage if plants are stressed.

Under adverse climatic conditions, apply 3 L / ha of ERGOFITO ACTIVATOR RESIDUI after 3 - 4 days by foliar spray and 3 L / ha by soil, repeating it after 3 - 4 days at the same dosages.

If you use ERGOFITO ACTIVATOR RESIDUI in mixture with the agrochemical at a rate of 3 L / ha by foliar application and 3 L / ha by soil, in addition to reduce the Pre Harvest Interval days and plant stress, it is enhanced the action and efficacy of the agrochemical.

WARNINGS

It is advisable to use ERGOFITO ACTIVATOR RESIDUI when plants are in full metabolic growth; close to the end of their growing cycle, therefore with a reduced metabolism, the product is less effective.

Authorized in Organic Agriculture as according to Commission Regulation (EC) n°889/2008
